Q & A

Boot @ OP-TEE.0327.md

Question: [09:21] Does OP-TEE OS exist in a single core or multiple cores at run-time?

Answer:

At runtime, the OP-TEE OS exists in a single core. It is designed to run on one core at a time in the secure world. However, OP-TEE supports concurrent execution of Trusted Applications (TAs) on different CPU cores. Although the OS itself runs on a single core, it can manage and schedule TAs running on separate cores, ensuring proper execution and isolation.
